

# Applications Everywhere

Your Gateway to Secure, Robust and Future-Ready Digital Workspace

## EACH NEW EMPLOYEE?

A fresh installation.

## EACH APP UPDATE?

A manual chore.

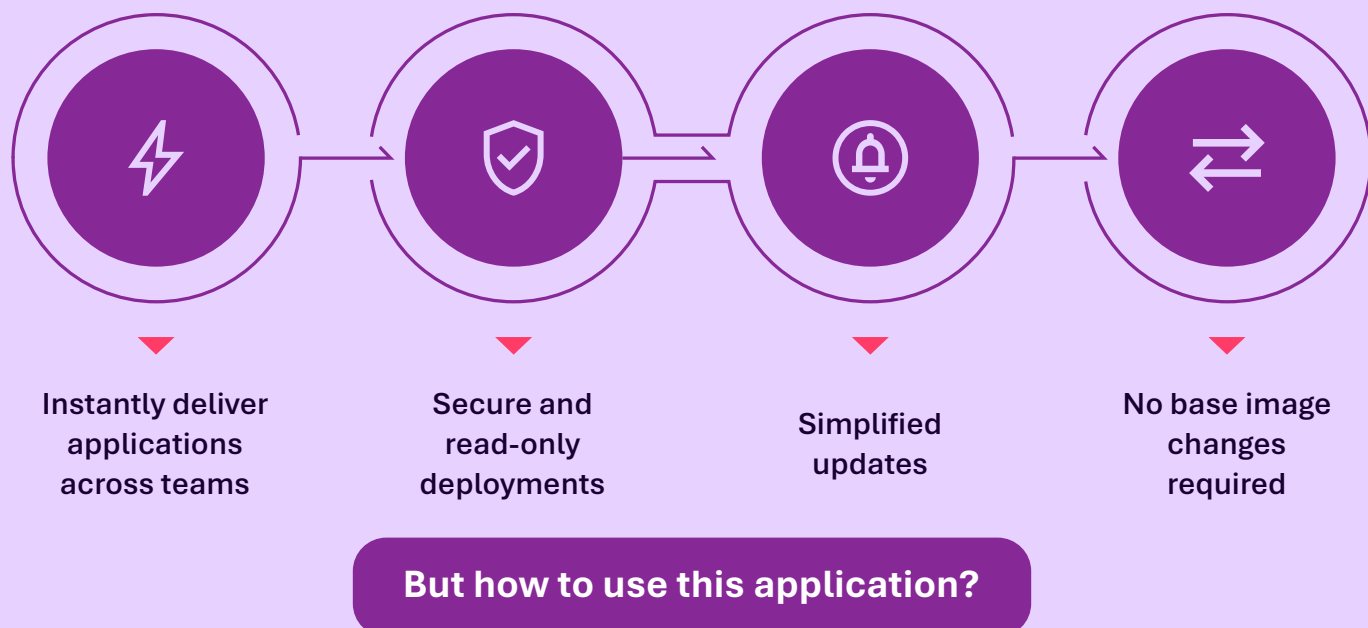

IT teams spent hours replicating the same setup, machine after machine.

It's time to abandon the traditional approach and adopt a new one that enables seamless application management. How can you do this?

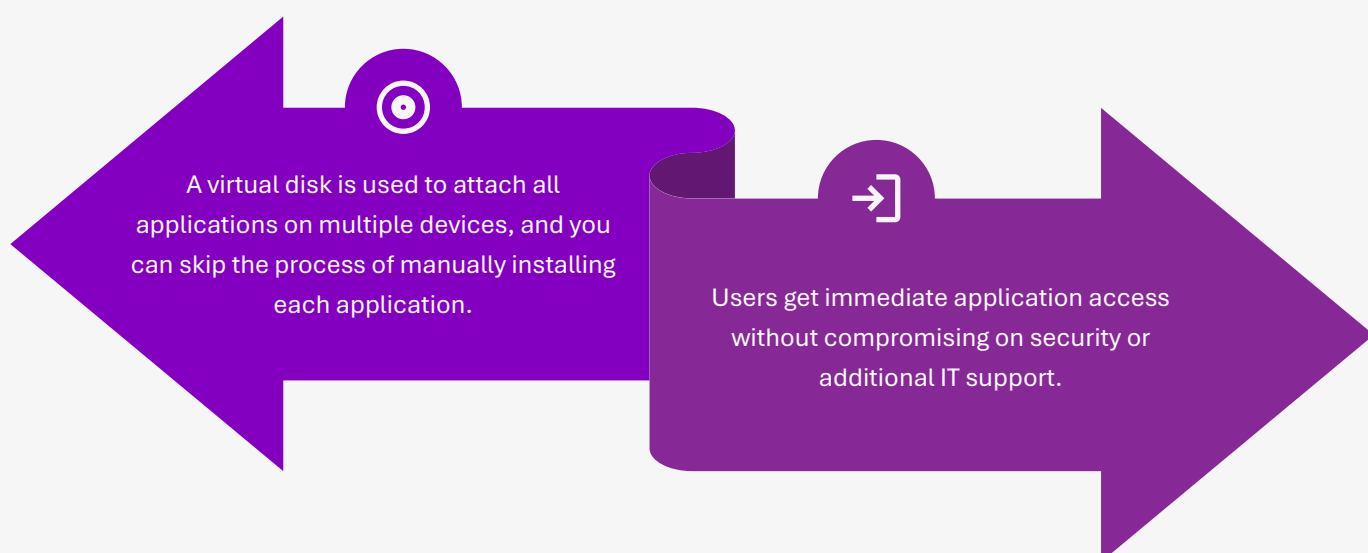

## APPS EVERYWHERE

Think of them as virtual disks—attached or detached in seconds.

Your IT team can:

## HOW DOES APPLICATIONS EVERYWHERE FUNCTION?

## WHY SHOULD YOUR BUSINESS INVEST IN APPLICATIONS EVERYWHERE?

### Quick Onboarding

Applications are attached to a single base image, which reduces the need for multiple base images and runtime. Users have all the required applications when they have device access.

### Reduced Storage Costs

A single image can be shared for multiple devices, which saves storage space.

### Simplified App Management

Users do not have to install applications every time; they can simply update and deploy them through virtual disks.

### Robust Security and Compliance

A secure and centralized environment ensures that all policies are maintained and reduces security breaches.

### Customized User Experience

Attaching writable volumes allows users to experience tailored application journeys.

## WHY CHOOSE ANUNTA?

Technical Reliability

Future-Proof Technologies

Frictionless Day 0- Day 2 Support

Scalable Solutions

READY TO STREAMLINE APPLICATION DELIVERY ACROSS YOUR DIGITAL WORKSPACE?
