

# WHY YOU SHOULD CHOOSE CLOUD DESKTOPS OVER VPN

Organizations now are establishing permanent work from home policies in the new normal. Cloud Desktops are the long-term solution (over VPN) that are sustainable, secure and scalable in enabling remote working for the workforce.

## Why Cloud Desktops Over VPN?

### CLOUD DESKTOPS

Enables Remote employees to connect to enterprise applications and data

Any security update can be made without physically touching the endpoints and zero disruption to work

Bandwidth efficiency since the virtualization software delivers the desktop screen without any data download at the endpoint

Investigate issues using desktop management portal and troubleshoot the issues remotely

The admins can install applications on a single desktop and replicate changes in other desktops

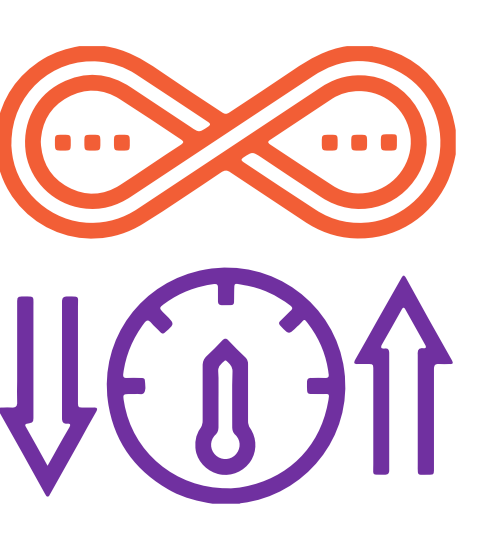

Quick & easy upgrades and patches to software and applications

### VPN

Vulnerable to Security Threats

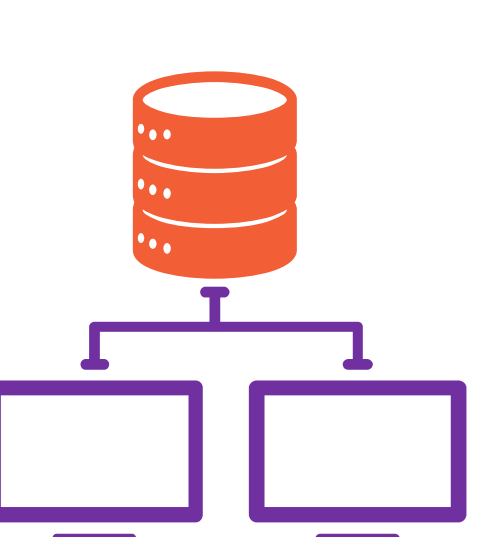

High Bandwidth Consumption

Lack of IT Control

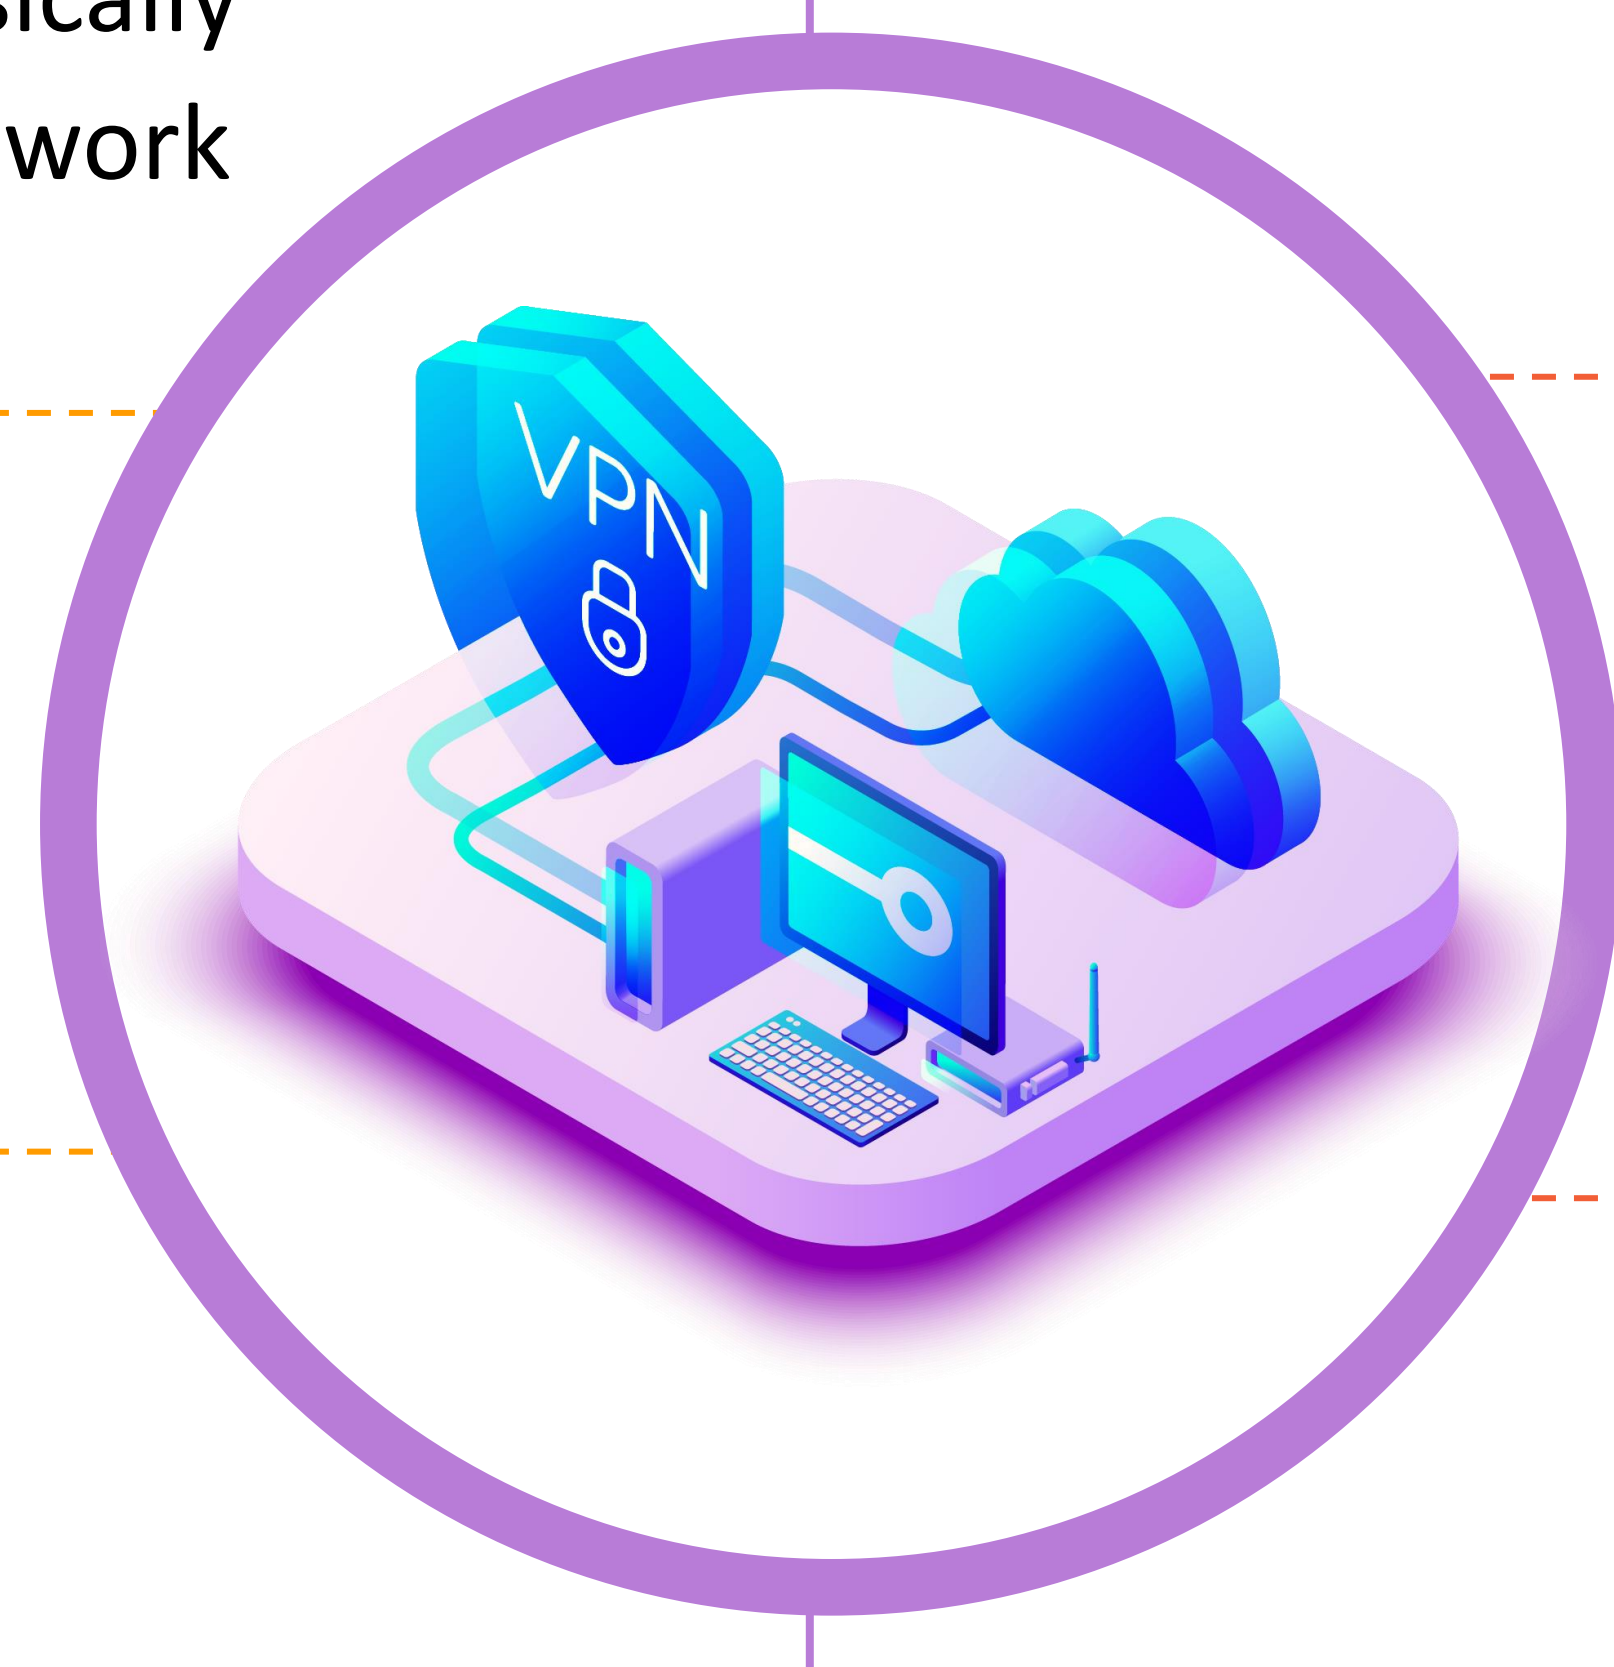

Data Storage at the Endpoint

Remote configuration of PC/Laptop for large user base is tedious

High on Capex and Opex

## Value Add to your Work Environment

Remote access to data and enterprise applications

Security and patch updates with zero disruption to work

Allow IT teams to focus on core business issues

Scale within minutes to add contractors, partners, new users depending on the need

Centralized troubleshoot of end-user issues

Bandwidth efficiency
