

Transform Your Hybrid Cloud

with Anunta's Nutanix
Managed Services

TABLE OF CONTENTS

01. One Platform for Hybrid Multicloud

02. Modernize Your Data center

03. Unify Operations on a Single Platform

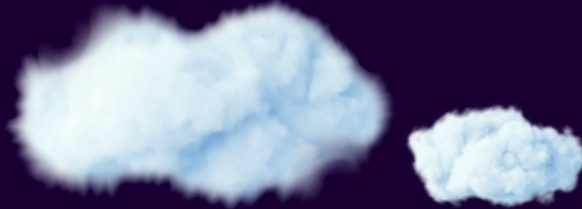

04. Speed App Development and Deployment

05. Move Apps and Data with Ease

06. Build More Agile and Flexible Operations

07. Protect Against Cyber Threats and Data Loss

08. Why a Managed Services Approach Matters?

The hybrid cloud has evolved from being a strategic option to an operational necessity. Enterprises today run a mix of on-premises infrastructure, private clouds, and public cloud services to support diverse workloads, regulatory needs, and business priorities. While this flexibility unlocks innovation, it also introduces complexity, fragmented operations, rising costs, security blind spots, and slower time to value.

A sound hybrid multicloud strategy and the right managed services partner are essential. This eBook demonstrates how enterprises can enhance their hybrid cloud journey with Nutanix and how Anunta's Nutanix Managed Services facilitate simplified operations, modernized infrastructure, and the development of resilient, future-ready IT.

This eBook is intended for CTOs, CIOs, IT managers, and IT decision-makers who are evaluating or optimizing hybrid cloud strategies and want clarity without unnecessary technical complexity.

01

One Platform for Hybrid Multicloud

Managing multiple clouds often requires various tools, teams, and models, which increases overhead and reduces visibility.

A unified hybrid multicloud platform standardizes on-premises, private cloud, and public cloud deployments. With Nutanix, enterprises run applications and data seamlessly across environments with consistent operations.

Anunta enables this unification by designing and managing hybrid multicloud environments that prioritize:

- Consistent governance and policies across clouds
- Simplified lifecycle management
- Predictable performance and cost control

Rather than forcing organizations to choose between on-prem or cloud, Anunta helps enterprises operate confidently across both, using a single, coherent platform strategy.

02

Modernize Your Datacenter

Traditional data centers were not built for modern agility, scalability, or adaptability. Legacy infrastructure leads to underutilized resources, manual processes, and increased operational risk.

Modernization isn't about disruptive replacements. It means:

- Converging infrastructure for better efficiency
- Automating routine operations
- Enabling cloud-like consumption models on-prem

Anunta's Nutanix Managed Services support a phased and practical data center modernization. Combining deep expertise and best practices, Anunta helps organizations:

- Extend the life and value of existing investments
- Reduce infrastructure sprawl
- Transition to software-defined, scalable architectures

The result is a data center that behaves like a cloud, responsive, efficient, and ready for future growth.

Unify Operations on a Single Platform

Operational complexity is a key challenge in hybrid environments. Multiple dashboards, siloed teams, and inconsistent processes slow decisions and increase error risk.

A unified operations model lets IT teams monitor, manage, and optimize workloads from a single control plane. Nutanix is the foundation, and Anunta ensures reliable and scalable operations.

Through managed operations, Anunta helps enterprises:

- Gain centralized visibility across environments
- Standardize operational processes
- Proactively monitor performance and capacity
- By reducing noise and complexity, IT teams can shift focus from firefighting to strategic initiatives that directly support business outcomes.

04

C++

Speed App Development and Deployment

Modern app teams need infrastructure that matches rapid development. Delayed provisioning slows innovation and frustrates stakeholders.

A modern hybrid cloud platform accelerates application development by providing:

- Faster provisioning of resources
- Self-service capabilities for development teams
- Integrated automation across environments

Anunta works with IT and app teams to align infrastructure with development needs. By managing Nutanix, Anunta enables:

- Faster time to deploy new applications
- Consistent environments across dev, test, and production
- Reduced friction between IT and development teams

This alignment enables organizations to innovate more quickly without compromising stability or governance.

05

Move Apps and Data with Ease

App and data mobility are vital for an effective hybrid cloud. Enterprises must move workloads based on performance, cost, compliance, or priorities.

Poorly planned migration projects are often complex and risky.

Anunta brings a structured, experience-led approach to workload mobility, helping organizations:

- Assess application dependencies and readiness
- Plan migrations with minimal disruption
- Execute moves across on-prem and cloud environments

By using Nutanix capabilities and proven migration frameworks, Anunta reduces risk and ensures continuity. Enterprises can then adapt infrastructure as business needs change.

Build More Agile and Flexible Operations

Agility is about more than speed; it's also about adaptability. Enterprises must scale resources up or down, respond to market shifts, and support new business models, all without rebuilding the entire IT stack.

A flexible hybrid cloud foundation enables:

- Elastic scaling across environments
- Faster response to business demands
- Better alignment between IT and organizational goals

Anunta's managed services boost flexibility by continually optimizing performance, cost, and resilience. Ongoing optimization keeps hybrid cloud an enabler of business agility, not a constraint.

07

Protect Against Cyber Threats and Data Loss

As hybrid environments expand, so does the attack surface. Embed security and data protection in infrastructure strategy, not as afterthoughts.

A resilient hybrid cloud approach includes:

- Built-in data protection and recovery mechanisms
- Consistent security policies across environments
- Proactive monitoring and risk mitigation

Anunta integrates security and resilience into its Nutanix Managed Services by:

- Designing secure architectures aligned with enterprise standards
- Managing backup, recovery, and business continuity processes
- Supporting compliance and governance requirements

This approach helps enterprises protect critical workloads and data while maintaining operational confidence.

08

Why a Managed Services Approach Matters?

Technology does not guarantee success. True hybrid cloud value depends on operations, optimization, and business alignment. Many enterprises adopt modern platforms but miss results due to gaps, skill shortages, or fragmented ownership.

A managed services approach bridges this gap by combining platform expertise, operational discipline, and continuous optimization. It ensures hybrid cloud environments are not only deployed correctly, but also evolve in step with business priorities.

Anunta: A Game Changer for Nutanix Managed Services

Nutanix provides a strong foundation for hybrid multicloud, but true transformation depends on operational excellence, governance, and optimization at scale. This is where Anunta excels.

Anunta employs a services-led, outcomes-focused approach to Nutanix Managed Services, enabling enterprises to move from infrastructure management to operational excellence.

What Makes Anunta a Game Changer?

Deep Nutanix-Centric Expertise

Anunta's teams are built for Nutanix environments, enabling fast onboarding, fewer blind spots, and best-practice execution from design to steady-state.

Enterprise-Grade Operating Models

Anunta tailors operating models to enterprise realities, regulatory needs, availability, and internal IT requirements, for predictable and resilient operations.

Proactive, Not Reactive Management

Anunta emphasizes proactive monitoring, capacity planning, and optimization. Issues are handled before they affect users or business services.

Hybrid Cloud Done the Right Way

Anunta helps enterprises operate seamlessly across on-premises and cloud environments, maintaining consistency in governance, security, and performance, without forcing unnecessary cloud-first or on-prem-first decisions.

Security, Resilience, and Trust Built In

From data protection and recovery to operational compliance, Anunta embeds security and resilience into everyday operations, helping enterprises reduce risk while maintaining agility.

A True Extension of Enterprise IT Teams

Anunta operates as a long-term partner, rather than a transactional vendor, working alongside internal teams to reduce operational burden, transfer knowledge, and continuously improve hybrid cloud outcomes.

This combination of platform expertise, operational maturity, and partnership mindset enables enterprises to unlock the full value of Nutanix without increasing complexity or operational risk.

Turn Hybrid Cloud Complexity into a Strategic Advantage

Contact Anunta today to discuss how our unified hybrid multicloud solutions can modernize your infrastructure, accelerate application delivery, and strengthen your organization's resilience.

Take a step toward transforming your hybrid cloud into a competitive advantage.
