

# How to Prioritize Your Migration Resources

ACTION	MUST DO	SHOULD DO	NICE TO HAVE
Identity & Access	Align Entra ID, conditional access, MFA, and legacy trust assumptions before pilot	Refine role-based access and exception handling	Policy optimization and cleanup
Application Readiness	Validate application behavior under new delivery model (not just compatibility)	Rationalize app delivery methods and packaging	App consolidation and cleanup
User Segmentation	Define user groups by performance, persistence, and security needs	Refine edge cases and special user profiles	Consolidate user personas
Profile Strategy	Decide persistence model and FSLogix behavior early	Tune profile performance and resiliency	Profile optimization for cost or speed
Networking	Validate real user paths, latency, and DNS behavior	Optimize routing and bandwidth allocation	Advanced traffic optimization
Support Model	Prepare support teams for Day 1 and Day 2 behavior changes	Update runbooks and escalation paths	Support automation
Governance & Change Control	Establish ownership and decision authority	Formalize change management workflows	Governance tooling enhancements
Image Strategy	Establish baseline images that support required apps	Reduce image sprawl	Image standardization
Automation		Introduce basic deployment automation	Advanced automation and orchestration
Cost Management	Baseline spend visibility and guardrails	Refine usage-based controls	Cost optimization beyond baseline
